Risks*

Risk Indicator

The risk indicator assumes you keep the product for 5 years.
The actual risk can vary significantly if you cash in at an early stage and you may get back less.

The summary risk indicator is a guide to the level of risk of this product compared to other products. In addition to the risks taken into account in the risk indicator, the following must be taken into account:

Liquidity risk

Liquidity risk exists when particular investments are difficult to purchase or sell. Consequently, the Fund may be unable to transact at advantageous times or prices and this can reduce expected returns.

ESG risk

An environmental, social or governance (ESG) event or situation that, if it occurs, could have a material adverse effect, actual or potential, on the value of one or more investments held by the Fund.

Currency risk

Changes in exchange rates may cause the value of your investment to decrease or increase.

* Please refer to the Fund's prospectus for a full list of risks which can affect the overall fund value.

Some definitions

- ▶ **ESG:** ESG stands for Environmental, Social and Governance.
- ▶ **Swing Price:** To limit the liquidity risk and protect all existing investors against the costs incurred by subscriptions and redemptions, the Fund can choose to apply a protection mechanism called "Swing Pricing". Swing Pricing aims to counter the negative impact (on the NAV) caused by inflows and outflows by automatically adjusting the NAV upward or downward using a predetermined percentage (the «Swing Factor») in the cases where these net inflows or outflows exceed the predefined levels (the "threshold(s)").
- ▶ **Volatility:** The extent of variability (standard deviation) of the evolution of the Net Asset Value (NAV).
- ▶ **Duration:** Measures the sensitivity of bonds to interest rates, calculated using the weighted average method. The longer the remaining period, the more volatile the bond prices are and react to a change in interest rates, the longer the duration. The term takes into account the coupon rate, the coupon dates, the maturity date and the redemption price of the bond. It indicates the average duration needed to collect all income (coupon yields and capital) from a bond.
- ▶ **Yield to Maturity:** A calculation method for the yield of the bond portion of the fund, expressed gross as a percentage.
- ▶ **Sharpe Ratio:** This figure makes it possible to compare the results of funds or sub-funds. The higher the ratio, the greater the potential for additional return at a certain risk. The Sharpe ratio reflects the higher yield than the risk-free return per unit of risk incurred. Risk-free return is the return that an investor can expect from a risk-free investment.
- ▶ **Emerging Markets:** An emerging market is a country whose gross domestic product is lower than that of a developed country. It is within developing countries that emerging countries have emerged. China, India and Indonesia, as well as the countries of Latin America such as Brazil and Argentina are regularly associated with this category.
